Informatics Engineering graduate with a 3.84 GPA and more than a year of experience as a Full Stack Developer. Used to owning a product end to end, from database design through release, for internal needs as well as external clients, one of which is registered as a Computer Program Copyright. Ready to build web and mobile applications from the backend to the interface, using AI tools to move faster without lowering code quality.

EDUCATION

STT Terpadu Nurul Fikri - Depok, Indonesia 2022 - 2026
Bachelor of Informatics Engineering | GPA 3.84 out of 4.00

WORK EXPERIENCE

PT Jarvis Integrasi Solusi - South Jakarta March 2025 - Present
Full Stack Developer - Remote

- Developed and maintained internal company applications, namely an HRIS and an ERP-based system.
- Built applications for external clients and taught the Backend Development class at Jarvis Academy.
- Delivered applications that are actively used by internal users as well as external clients.

STT Terpadu Nurul Fikri - Depok, Indonesia September 2024 - January 2025
Backend Development Teaching Assistant

- Ran Backend Development lab sessions and guided students through their course projects.
- Wrote structured lab modules as a guide for hands-on learning.
- Brought students to the point of building simple REST APIs by the end of the semester.

Fixin Solutions - Depok, Indonesia December 2023 - July 2024
Web Developer

- Built an integrated admin system for order management, service scheduling, and inventory.
- Developed a laptop repair booking site and handled weekly maintenance and bug fixing.
- Merged separate records of orders, schedules, and stock into one system the team uses daily.

PROJECTS

Sobat Sehat - Research Internship, STT Terpadu Nurul Fikri - [Website](#) September 2024 - September 2025

- Built a web platform for public sports information and events in Depok, for KORMI Depok.
- Registered as a Computer Program Copyright at DJKI and used publicly by local sports communities.

Aqua Access - IoT Programming Course Project - [Presentation Video](#) December 2025 - January 2026

- Built an RFID-based IoT drinking water access system, from the mobile app to the device integration.
- Selected as the best project in the course.

AI Skin - Bangkit Academy Capstone Project - [Repository](#) November 2024 - January 2025

- Built an Android app that detects skin conditions with machine learning, working on the API service and its integration.
- Served as the Bangkit Academy graduation capstone, finishing with a score of 91.07.

Sentiment Checker - Introduction to AI Course Project - [Website](#) June 2024

- Built a web app for text sentiment analysis, from the backend service to the user interface.
- Released and publicly accessible.
